

Planting 11 – Northwest Field Planting/Clear Creek Unit – 1993

This was planted to tall grasses, mostly Indian grass from Genesis Nursery, by the previous owner, Matt Sawyer. It was done by seed drill. It was burned by us once and the grass came in very dense.

We added forbs later, perhaps in 1998. There is a little coming up such as yellow coneflower (*Ratibida pinnata*).

There are some weeds such as white sweet clover, which we have tried, half heartedly, to control.
