

Planting 33 – Triangle Field Hook Larson Prairie Unit – Spring 1999

This was a row crop field of corn and beans. The waterway between planting 25 and 52 was bulldozed flat, but this waterway quickly filled in with reed canary grass and cool season grasses. This should be mowed and sprayed for a while, and then disked and sprayed and then planted to prairie. (August 2006 BK)

In May of 1999, this row crop field was disked and then hand planted with a Genesis Nursery mix of forbs and grasses (such as side oats grama) and with N.G. little bluestem grass. It was harrowed in. The field was mowed at least once in the summer of 1999.

Much side oats and little bluestem was growing by the late summer (the side oats was even blooming).

Bill drove new seed spreader (FS fertilizer buggy) over this planting on June 4 2001 with the ComEd mix (also had seed for HLP, Nachusa harvest in it.)
